NOVAGLASS • BLUE SEA

NOVAGLASS • BLACK ONYX

DESCRIPTION

This set of new stains has been designed to overcome the transparency limits of pigments, maintaining their light fastness at the same time.

On the other hand it has the same transparency and brightness as the best dyes available on the market.

The **NOVAGLASS** series is supplied in liquid form as high concentrated solution in water.

NOVAGLASS products can be mixed directly in WB varnishes for glass, single or bi-component, acrylic and/or PU based in the ratio between 1 to 10%.

To assure the perfect incorporation of the stains with binders, we suggest mixing under stirring.

Due to its good compatibility, the product can be applied by spray, roller or curtain.

Used in the indicated proportion the stains do not affect the curing time of the system and do not compromise the technical characteristics.

The technical data above stated are presented in good faith and to the best of our knowledge. They should serve only as approximate guidance and therefore customers are kindly advised to test and ascertain the performance of our products in the operating conditions existing at their end, to satisfy Themselves about their suitability in a given industrial application.
